

IV@

A WORD FROM THE FOUNDER

Dear Friends of IVO,

This impact report is the first of its kind since International Veterinary Outreach was founded in 2011. From what started as a side project by a group of passionate veterinary students, to what it has evolved into today, the work that we do has always been fueled by our dedicated volunteers and generous donors.

Whereas an impact report typically conveys the progress of an organization's programs over a oneyear period, this report also highlights IVO's successes since the beginning.

As we move into the year 2022, much of the groundwork has been laid for what comes next. IVO is now poised more than ever to catapult to the next level and we look forward to significantly increasing our impact on a grander scale.

Thank you for all that you have done to make this vision become a reality.

With Gratitude,

E. Eizenman

DR. ERIC EISENMAN FOUNDER & CHAIR OF THE BOARD

A DECADE OF IMPACT

MISSION

International Veterinary Outreach (IVO) focuses to create healthy communities free of animal suffering. We take a One Health approach to develop and implement sustainable veterinary services and training programs in economically disadvantaged communities worldwide.

VISION

We envision a world free of animal suffering where communities connected with animals thrive.

A DECADE OF IMPACT

OUR TIMELINE

2015

2011

Covelo, CA

2012

Chile

IVO's first project debuts in Nicaragua by a group of University of California-Davis (UCD) veterinary students. A total of 2.352 animals were treated over the course of our nine visits. In 2015, the program was handed over to a new student club, allowing IVO to begin maturing into a professional nonprofit organization.

IVO initiates first domestic project in isolated Round Valley Indian Reservation in Mendocino County, California. We have completed 19 clinics since 2012, and we've treated 2,378 dogs & cats, with most of them spayed or neutered, vaccinated, and deparasitized.

By teaming up with the One Health Institute (of UCD), University of Chile, Wildlife Conservation Society, and the National Institute of Health, IVO launches its first large-scale public health research project in Tierra del Fuego, Chile, documenting an increase in the prevalence of dogs carrying a tapeworm that is infectious to people.

Oakland, CA

IVO launches the first

volume, spay/neuter

unique to the U.S. West

high-quality, high-

training program

Philippines

IVO rolls out a

working horse

welfare project with

PETA Asia on Taal

Island. Four clinics

between 2017-2019

treated, as well as

21 local veterinary students & 25 farrier apprentices trained.

were conducted

with 1,148 horses

Coast.

2017

Nepal

2021

Initial planning is underway for a new collaborative project with Snow Leopard Conservancy and San Francisco Zoo in which we will be working closely with Nepalese herders whose lives are directly impacted when snow leopards prey upon their livestock in the Annapurna Conservation Area.

NICARAGUA

IVO's first project was launched in Northwestern Nicaragua by using our original model for sustainability (revolving door of vet student volunteers). A total of 2,352 animals were treated over the course of 9 trips (2011-2015).

Eventually, a spin-off student group called Global Veterinary Alliance (GVA) was formed and IVO handed off the project to GVA which allowed IVO to start maturing into a professionally-run organization.

COVELO, CALIFORNIA

At the Round Valley Indian Reservation IVO completed 19 weekends of clinics! It was our only other program managed by vet students. From 2012 to 2020, we treated 2,378 animals, with a majority of them spayed or neutered. This program brought together the University of California-Davis and San Francisco Bay Area veterinary communities. In 2021 the program was handed off to the UC Davis School of Veterinary Medicine.

A DECADE OF IMPACT

TIERRA DEL FUEGO, CHILE

Our collaborative research-focused project with the One Health Institute, University of Chile, Wildlife Conservation Society, and the National Institute of Health documented an increase in the prevalence of dogs carrying a zoonotic tapeworm (Echinococcus granulosus) from 1.2% in 2002 to 6.3% in 2016. Results were critical for public health officials to implement mitigation techniques to reduce the transmission of the disease.

OAKLAND, CALIFORNIA

Even in IVO's own backyard there's a lack of access to preventative veterinary care which often leads to overpopulation, spread of disease, pet abandonment, & crowded shelters. In collaboration with Friends of Oakland Animal Services (FOAS) IVO led efforts to provided 311 free spay & neuter surgeries while training more than 65 students from 2017 to 2020.

TAAL ISLAND, PHILIPPINES

Taal is a small volcanic island isolated from the mainland and any major city with an estimated 5,000 people and as many as 1,200 horses. Horses are the main source of transportation and income for most families. IVO conducted four clinics from 2017 to 2019 with 1,148 horses treated, 21 local vet students and 25 farrier apprentices trained.

BUILDING PARTNERSHIPS IN NEPAL AND BEYOND

IVO now has multiple potential programs in the works, but 2022 is the kickoff of an exciting new collaborative program with the **Snow Leopard Conservancy and** San Francisco Zoo in which we will be working closely with Nepalese herders whose lives are directly impacted when snow leopards prey upon their livestock. By providing herders with basic training in healthcare and husbandry techniques, along with predator-proofing techniques for livestock, we aim to help reduce retaliatory killings of snow leopards.

MAKE A GIFT

We need your support and every dollar makes an impact! Please consider making a one-time or recurring donation at: <u>www.ivo.vet/donate</u> or by mailing a check to: 'IVO' at PO Box 590938 San Francisco, CA 94159 USA US tax ID number 45-3738430

THANK YOU!

We couldn't have done it without the tireless dedication of our volunteers, the support from our partners, and openhanded generosity of our donors... so, THANK YOU! We look forward to catapulting our impact much higher in 2022 and beyond!
